The Authors

Annette Andreas is working for Landesbank Hessen-Thüringen in Frankfurt. She completed her diploma thesis in mathematics at Goethe University in Frankfurt on a comparison of methods for the valuation of spread options, and her research focuses on stochastics and finance.
(e-mail: aandreas@stud.uni-frankfurt.de)

Thomas Apel is assistant professor at the faculty of mathematics of Chemnitz Technical University, Germany. He works on numerical methods for solving partial differential equations. He completed all of his degrees (Diploma 1986, PhD 1991, Habilitation 1998) at Chemnitz, but he also worked at the Lomonossov University Moscow, at Brunel University in London, and at the Universitè de Valenciennes et du Hainaut Cambrésis in France.
(e-mail: na.apel@na-net.ornl.gov, http://www.tu-chemnitz.de/~tap)

Anna-Georgia Davveta is currently working for Bankgesellschaft Berlin. She was a research fellow in the Quantitative Research Team of Commerzbank Treasury Financial Products where she dealt with a model for long-term Foreign Exchange (FX) options. Miss Davveta holds a BSc in mathematics from the University of Patras in Greece and a MSc in financial mathematics from the University of Warwick in England. (e-mail: annadaveta@hotmail.com)

Bernd Engelmann works with the Banking Supervision Research Group at Deutsche Bundesbank in Frankfurt. His research interests include banking regulation, credit risk modelling and derivatives pricing. He has a Master's degree in mathematics and a PhD in finance from the University of Vienna.
(e-mail: bernd.engelmann@bundesbank.de)

Angelika Esser received a diploma degree in mathematics at Goethe University in Frankfurt in 1998. She is currently a PhD student at the Faculty of Economics and Business Administration at Goethe University. Her research interests include derivative pricing and hedging in incomplete markets.
(e-mail: esser@wiwi.uni-frankfurt.de)

Gian Marco Felice worked as a quantitative research specialist at Commerzbank Treasury and Financial Products in Frankfurt until September 2001, where he dealt with issues associated with interest rate derivative pricing and interest rate model analysis. He holds a BSc in nuclear engineering from the Massachusetts Institute of Technology and a PhD in astrophysical sciences from Princeton University.

Jürgen Hakala has been head of quantitative research at Commerzbank Treasury and Financial Products for four years. His research areas are models and products for FX derivatives and hybrid interest rate and FX models. Computational finance is a central element for all his research. He received a Master's degree in theoretical physics from the University of Karlsruhe and a PhD in mathematics from the University of Bonn at the Institute for Neural Networks. (e-mail: juergen.hakala@commerzbank.com)

Michael Kirch is currently finishing his PhD in mathematics on Efficient Hedging under Model-Uncertainty at Humboldt University Berlin. As a research fellow at Commerzbank Treasury and Financial Products in winter 1997, he developed a pricing tool for FX options that is calibrated from the implied volatility surface. More recently, he worked for Deloitte Consulting in Hamburg and for the Deutsche Bank Global Quantitative Research Group in New York and London. (e-mail: michael.kirch@gmx.net)

María Martínez is currently working in the credit risk department at Commerzbank AG. María carries out credit exposure analysis by means of Monte Carlo simulations. She has a PhD in mathematics from the University of California, San Diego. (e-mail: maria.martinez@commerzbank.com)

Bereshad Nonas currently works as quantitative analyst in the Risk Control Department of Commerzbank AG in Frankfurt. As an intern at Commerzbank Treasury and Financial Products he studied and optimised Monte Carlo algorithms for financial derivatives. He holds a diploma and a PhD in theoretical physics from the Technical University of Aachen. (e-mail: bereshad.nonas@commerzbank.com)

Ghislain Perissé is the hedge funds quantitative research head at Société Générale Asset Management. He works on different underlyings from the point of view of market-making (guaranteed products on funds and hedge funds) and from the investment process (convertible, FX, equity, rates). At the same time he is working on a PhD with Nicole El Karoui in applications of Wiener Chaos to financial mathematics and the valuation of exotic products. Before that he worked for Credit Lyonnais (Rates Derivatives) and for Commerzbank, as a quantitative research specialist at Commerzbank Treasury and Financial Products in Frankfurt and Paris. He graduated from the École Polytechnique, where he received his Master's degrees in physics, mechanics, biology, applied mathematics and economics. (e-mail: ghislain.perisse@sgam.com)

Oliver Reiß received a Master's degree in physics at the University of Osnabrück. He currently works at the Weierstrass Institute for Applied Analysis and Stochastics in Berlin, in the field of applied mathematical finance. His research interests include derivatives pricing, computation of option price sensitivities and efficient numerical algorithms for risk management. He also supports the consulting activities of the Institute. (e-mail: reiss@wias-berlin.de)

Holger Schilling is currently working at Commerzbank Treasury and Financial Products, Frankfurt. His chapter in this volume is part of his diploma thesis in mathematics at Goethe University. (e-mail: holger.schilling@commerzbank.com)

Christian Schlag is professor of finance at the Faculty of Economics and Business Adminstration of Goethe University in Frankfurt. He studied business adminstration and economics at the University of Augsburg and Wayne State

University, Detroit, respectively. He received his PhD in business from the University of Karslruhe and joined Goethe University in 1998. His research interests include the pricing of derivatives and empirical capital market research. (e-mail: schlag@wiwi.uni-frankfurt.de)

Uwe Schmock is currently research director of the finance competence centre RiskLab, within the Department of Mathematics at the Swiss Federal Institute of Technology (ETH) in Zürich. The Swiss RiskLab is financially supported by Credit Suisse Group, Swiss Re, UBS AG, and ETH Zürich. Uwe studied mathematics and physics at the Technical University (TU) of Berlin and at the California Institute of Technology. He holds a diploma and a PhD in mathematics from the TU Berlin. He formerly worked for five years as a researcher at the University of Zürich and for four years as Credit Suisse Research Fellow at ETH Zürich. Uwe's research interests include applications of large and moderate deviations theory, securitisation, applications of extreme value theory, model risk, risk capital allocation and all aspects of mathematical finance. (e-mail: schmock@math.ethz.ch http://www.math.ethz.ch/∼schmock/)

Ingo Schneider is fixed income derivatives trader at BHF-Bank, (ING-Group) Frankfurt. He trades interest rate derivatives, develops and implements OTC interest rate derivative products and works on term structure models. He received his diploma and doctorate degree in physics from Goethe University in Frankfurt. (e-mail: ingo.schneider@bhf-bank.com)

Peter Schwendner is head of the Quantitative Products Group at Sal. Oppenheim jr. & Cie in Frankfurt. He develops and implements retail and OTC derivative products and works on volatility models. He received his Master's degree and PhD in physics from the University of Göttingen. (e-mail: peter.schwendner@oppenheim.de)

Tino Senge is a quantitative research specialist at Commerzbank Treasury and Financial Products in Frankfurt, where he is working on models for pricing FX derivatives. Tino has studied Mathematics in Jena (Germany) and Cork (Ireland). Before joining Commerzbank he had worked with Commerz Financial Products and DG Bank. His current research interests include jump-diffusion models for modelling the volatility smile in FX markets and its application to the pricing of exotic derivatives. (e-mail: tino@senge.de http://www.senge.de)

Steven E. Shreve is a professor of mathematics at Carnegie Mellon University. Steven is the author, with I. Karatzas, of two books related to finance: *Brownian Motion and Stochastic Calculus* and *Methods of Mathematical Finance*, co-editor of the proceedings Mathematical Finance, Vol. 65, Institute for Mathematics and its Applications, and advisory editor of the journal *Finance and Stochastics*. Steven began research on the capital asset pricing model in 1980 and has worked in various aspects of mathematical finance since then, including the effect of transaction costs on option pricing, the effect of unknown volatility on option prices, pricing and hedging of exotic options, and models of credit risk. In 1991 he founded the PhD course in mathematical finance at Carnegie Mellon, and in 1994 was one of the founders of the Master's course in computational finance. (e-mail: shreve@cmu.edu)

Jürgen Topper joined Andersen in 1997 after completing a Master's degree in economics at the University of Hannover (Germany). During his university years, Jürgen worked on several projects for mechanical engineering in academia and industry on coupling finite element analysis with tools from operations research. Jürgen's primary areas of interest are exotic derivatives and structured products. His consulting practice includes numerous international banks and European corporates. (e-mail:juergen.topper@de.andersen.com)

Andreas Weber is currently working with Commerzbank Treasury and Financial Products as a specialist for quantitative research. He studied theology, mathematics, and physics at the universities of Frankfurt and Münster in Germany. (e-mail: weber@mathfinance.de)

Gunter Winkler is assistant at Chemnitz University of Technology where he is currently investigating mathematical models and numerical methods for financial engineering. Gunter completed his diploma thesis on finite element methods, parts of which are reproduced in this volume. (e-mail: guwi17@gmx.de)

Uwe Wystup is a quantitative research specialist at Commerzbank Treasury and Financial Products, Frankfurt and is founder and manager of the website MathFinance and the *MathFinance* newsletter. Uwe has a PhD from Carnegie Mellon University in valuing exotic options under short selling constraints. He also lectures on mathematical finance for Goethe University in Frankfurt and organises the Frankfurt MathFinance Colloquium. Before that he worked for Deutsche Bank, Citibank, UBS and Sal. Oppenheim jr. & Cie. Uwe has given many presentations at both universities and banks around the world.
